

2LINE Helios BOX

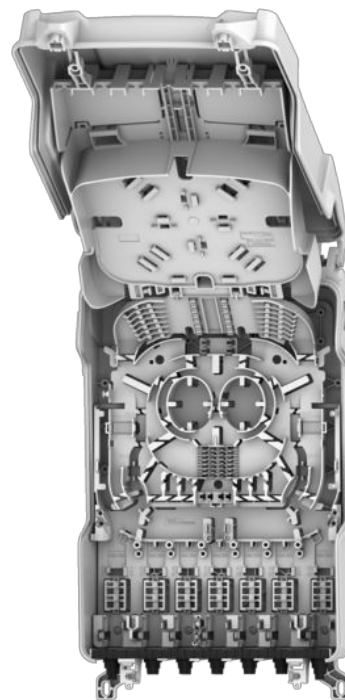

Customer line termination

2LINE Helios BOX

Article no.: 2LINE Helios BOX

The 2LINE Helios BOX is an optical fibre termination point for terminating the fibre in the building. All features and functions for a professional transfer and termination point of an FTTx network are represented in a robust plastic housing.

- **all expansion types possible without pre-configuration**
- **symmetrical design for maximum flexibility during installation and tension interception**
- **separation of patch and splice area allows connection without specialised personnel**

Picture may differ from selected product

Facts

Advantages:

- accommodates up to 13 couplers (LC duplex, SC or E2000)
- holds 28 crimp splices or 14 shrink splices
- can be extended to 112 crimp splices or 98 shrink splices by installing 7 cassettes
- separation between patch and splice area by inner cover
- optimised for installations with pre-assembled cables
- versatile options for loose tube and cable overlength storage

Scope of delivery:

- 2LINE Helios BOX
- mounting material
- assembly instructions via QR code
- inner lid (optional)
- couplings and pigtails (optional)
- lock (optional)
- splice cassettes (optional)
- label (printing according to customer requirements possible) (optional)

Dimensions:

- HxWxD [mm]: 384x235x113

Tests/Standards:

- protection class IP54
- self-extinguishing according to UL94 V0

Features

Splice count: 28
